Six Weeks in Uganda

Larner students find a deeper understanding of medicine across cultures.

ALSO FEATURED: • PASSIONATE PARASITOLOGIST • HEALTH SERVICES RESEARCH
Infectious Enthusiasm

Pathologist Bobbi Pritt, M.D., saw “beautiful things” the first time she saw a slide of human tissue. She’s followed those sights to become an authority on parasites and vector-borne diseases.

BY CAROLYN SHAPIRO

Six Weeks in Uganda

Medical students Katherine Callahan ’21 and Christina Dawson ’21 arrived in Kampala, Uganda, not quite sure what to expect. They returned to Vermont six weeks later with a deeper understanding of medicine across cultures, and what it means to be a physician.

PROFILE IN GIVING

A Commitment to Improving and Integrating Care

As a clinical urologic oncologist and cancer researcher, Scott Perrapato, D.O., FACS, helps patients fight cancer through surgery, chemotherapy, and other cutting-edge treatments available at the UVM Medical Center and UVM Cancer Center. Tracy Perrapato, D.O., Scott’s wife, is a family medicine physician skilled in the osteopathic fields of cranial sacral and biodynamic therapies, and a master of Reiki, a therapy that harnesses the energy of the human body to heal and restore. Together, the Perrapatos have created an integrative therapies fund for the UVM Cancer Center. The gift of $100,000 provides three years of seed funding for patient access to hands-on care such as massage therapy, acupuncture, mindfulness training, Healing Touch, Reiki therapy, and yoga.

“This fund is vital because it directly impacts a patient’s healing and improves quality of life during difficult therapies,” says Scott Perrapato. “Given the fast pace of medicine in our current climate, these therapies help the patient’s mind, body and spirit heal in a caring and supportive environment.”

In addition to their giving to the UVM Cancer Center, the Perrapato family recently honored Scott’s parents through the creation of the Ruth and Carmine Perrapato Endowed Lecture in Urologic Oncology at UVM’s Larner College of Medicine. The $100,000 endowment brings leading researchers and practitioners to Burlington each year to help ensure community practitioners, UVM Cancer Center researchers, and medical center residents continue to stay up-to-date on the newest developments in the field.

For information about how you can support the work of the UVM Larner College of Medicine and its affiliates, please contact the Medical Development and Alumni Relations Office.

My first few weeks as dean of Larner College of Medicine have been a whirlwind. Never before have I experienced such energy and enthusiasm, or such a warm welcome. My fortuitous arrival during the week of reunion and homecoming allowed me to accelerate my connection with this wonderful University of Vermont community.

In my first ten days on campus, two significant events took place that underscored this institution’s commitment to the missions of education, research, and patient care.

The first of those events was the White Coat Ceremony for our Class of 2022. These students, who had spent their two months prior, and were already immersed in the active learning experiences of the Vermont Integrated Curriculum. But this ceremony marked an important turning point for the class — the beginning of their role as clinical learners, and as members of patient care teams. I was moved, as I sat on the stage at Ira Allen Chapel, by what I saw happening before my eyes: row upon row of students clad in street clothes were transformed into medical professionals as they donned this symbolic garment, and as they recited the physician’s oath.

Of course a white coat does not magically transform anyone. But wearing the coat is a highly visible, outward representation of an acceptance of responsibility as one joins the medical profession. These students may or may not routinely wear a white coat in their future careers; but throughout the rest of their days at the College, and throughout the rest of their lives, the members of the Class of ‘22 will never shed their responsibility for the welfare of their patients and the tenets that our oath provides. We wear that forever, as all physicians do.

The second recent major event was a celebration of the College’s research mission. On October 11, UVM’s fifth NIH Center of Biomedical Research Excellence, the Translational Global Infectious Disease Research Center, was announced at a press conference in our Hoehl Gallery. I was already impressed by the close proximity of the various colleges and schools of the University. This multi-million-dollar, multidisciplinary research grant highlighted the advantage of the relationships among this University’s researchers, wherever their "home base" might be. Such collaboration across campus, in this case among the Larner College of Medicine, the College of Engineering and Mathematical Sciences, and the College of Agriculture and Life Sciences, is critically important in today’s research environment.

In the months ahead, I plan to meet many more members of the Larner community and listen to your aspirations for our College. It is a tremendous honor to serve as the dean of this great institution and I look forward to the many opportunities before us to contribute to education, clinical care and research in Vermont and beyond.
UVM Launches Emergency Medicine Residency Program

UVM has created a new emergency medicine residency program, with its inaugural class of six residents slated to arrive in July of 2019. Directed by UVM Associate Professor of Surgery Richard Bounds, M.D., FACP, FAEMS, the three-year program is primarily based at UVM Medical Center but also includes rotations at Champlain Valley Physicians Hospital in Plattsburgh, N.Y., and Central Vermont Medical Center in Berlin. The vision for the program combines training at a nationally-recognized academic medical center, with deep experience providing emergency care in a resource-limited environment. To this end, residents will receive advanced training and leadership opportunities in key areas of emergency medicine including rural emergency medicine, wilderness medicine, point-of-care ultrasound, EMS medical direction, and global health.

A Trio of College Researchers Receive SPARK VT Funding

Three Larner College of Medicine researchers have been awarded 2018 SPARK VT grants by the UVM Offices of the Provost and Vice President for Research. SPARK VT, a University-wide program designed to cultivate faculty entrepreneurship and technology commercialization, features a panel of distinguished and successful entrepreneurs who critically evaluate projects presented by selected researchers from across the University. Those judged to be most meritorious receive start-up funding and milestone evaluation by the panel.

The 2018 SPARK VT recipients are:

- UVM Associate Professor of Medicine Jason Botten, Ph.D. [1], for Development of monoclonal antibodies for treatment of hantavirus disease in North America.
- UVM Professor of Medicine Peter Spector, M.D. [2], for Seeing Atrial Fibrillation through a Cleaver Lens.
- UVM Professor of Medicine Daniel Weiss, M.D., Ph.D. [3], for Development of Tissue-Specific Biomarkers for Regenerative Medicine.

UVM CENTER ON BEHAVIOR AND HEALTH RECEIVES $11.7 MILLION GRANT TO CONTINUE RESEARCH ON UNHEALTHY LIFESTYLE PATTERNS

An $11.7 million Center of Biomedical Research Excellence (COBRE) grant renewal to the Vermont Center on Behavior and Health will support another five years of research on addressing and better understanding the unhealthy behaviors that negatively impact health and cost the U.S. healthcare system billions of dollars. The funding comes from the National Institute of General Medical Sciences (NIGMS) and National Institute on Drug Abuse (NIDA). Led by Stephen Higgins, Ph.D., director of the VCBI and professor of psychiatry and psychological science, the grant focuses on understanding the mechanisms underpinning vulnerability to unhealthy behavior and developing effective behavior-change interventions, with the end goal of establishing a productive, stand-alone center of research excellence in biomedical research. To this end, the VCBI has already made considerable progress in this area during its first five years. Higgins and the UVM COBRE faculty and collaborators have published an impressive 185 peer-reviewed publications in the area of behavior and health in the past five years, garnered nearly $60 million in additional external grant funding, and have established a successful early-career faculty mentoring program.

MONTGOMERY HONORED WITH 2018 OUR COMMON GROUND AWARD

Erin Montgomery, coordinator of faculty development, graduate education, and postdoctoral training for the Larner College of Medicine, has been selected as a recipient of a 2018 President’s Our Common Ground Award. She was recognized at an awards breakfast being held at the University of Vermont on June 20, 2018. The Our Common Ground Staff Award recognizes UVM staff members who exemplify the qualities of Our Common Ground, the statement of aspirations and shared values for the UVM community: Respect, Integrity, Innovation, Openness, Justice, and Responsibility. The award honors the extraordinary contributions and the significant impact the award recipients have made on the University. Montgomery, who has worked at UVM since 2004, was nominated for the award by members of the UVM Postdoctoral Association. Each recipient receives a trophy, a prize of $1,000 and is recognized on a permanent plaque.

PARSONS LEADS AMERICAN THORACIC SOCIETY, NAMED ATS FELLOW WITH 3 UVM COLLEAGUES

University of Vermont E.L. Amidon Chair of Medicine Polly Parsons, M.D. [1], was installed as president of the American Thoracic Society (ATS) during the organization’s 2018 International Congress, held in San Diego, Calif., May 20 to 25, 2018. Parsons will hold the position for a one-year term. In addition, Parsons and three Larner College of Medicine colleagues, including Jason Bates, Ph.D., Sc.D. [2], Anne Dixon, M.A., B.M., B.Ch. [3], and Renee Stapleton, M.D., Ph.D. [4], were inducted as the inaugural class of ATS Fellows at the event. With a mission to improve health worldwide by advancing research, clinical care, and public health in respiratory disease, critical illness, and sleep disorders, the ATS has more than 15,000 physicians, research scientists, and nurses and other allied health professionals among its members. The Fellow designation — ATS Fellow — is a mark of distinction for ATS members who have demonstrated dedication to the Society and made significant contributions to the fields of pulmonary, critical care, and/or sleep medicine.

KING ELECTED CHAIR OF FEDERATION OF STATE MEDICAL BOARDS

UVM Professor of Medicine Patricia King, M.D., Ph.D., was elected chair of the Federation of State Medical Boards (FSMB) at the organization’s 106th annual meeting in Charlotte, N.C., on April 28, 2018. King, who served as the FSMB chair-elect from 2017-18, will have a one-year term as chair. The FSMB Board of Directors is composed of leaders from the field of medical regulation that are passionate about protecting the public and serving their communities. By serving on the board of directors, individuals have the opportunity to help drive the strategy and direction of a nationally respected organization with a critical role in healthcare. A former chairwoman of the Vermont Board of Medical Practice, King has served as a member of the FSMB board since 2005 and is the 2014 recipient of the FSMB’s John H. Clark, M.D., Leadership Award.

WOOD NAMED FELLOW OF THE AMERICAN SOCIETY OF CLINICAL ONCOLOGY

UVM Professor of Medicine Marie Wood, M.D., was named a Fellow of the American Society of Clinical Oncology (ASCO) at the organization’s annual meeting, held June 1 to 5, 2018 in Chicago, Ill. The distinction recognizes ASCO members for their extraordinary volunteer service, dedication, and commitment to ASCO. Wood, who joined the UVM faculty in 1997, is director of the UVM Cancer Center’s Familial Cancer Program and founder and principal investigator of the High Risk Breast Program. In addition to her service on four ASCO committees, she also an active member of the Alliance for Clinical Trials in Oncology, the National Surgical Adjuvant Breast and Bowel Project and has been a Fellow of the American College of Physicians since 2010.
**WE WANT TO CONTINUE TO SERVE OUR APPLICANT POOL WELL AND REDUCE BIAS.”** — ALISON HOWE, M.S.

For Gayathri Prabhakar, M.D./’18, who has served as a volunteer for admissions since her first year, the research opens up interesting new questions to explore, including whether the type of experience applicants gain in between their undergraduate degree and medical school makes a difference in the application process. “The trend is to take time off between undergrad and medical school,” she says. “What do the different experiences that people have mean for them?”

The poster was one of two to receive a 2018 Excellence in Medical Education Award at the NEGEA annual meeting, held this year at the Zacker School of Medicine at Hofstra/Northwell.*

The admissions research team analyzed MMI scores from a total of 28 healthy, non-pregnant adults ages 18 to 60 at the Johns Hopkins Bloomberg School of Public Health Center for Immunization Research in Baltimore, MD, and at the Vaccine Testing Center at the Larner College of Medicine. NAID is sponsoring the trial. UVM Associate Professor of Medicine Kristen Pierce, M.D., is a co-investigator for the Phase 1 trial.

**VACCINE TESTING CENTER A SITE FOR NEW NIH LIVE, ATTENUATED ZIKA VACCINE TRIAL**

Vaccinations have begun in a first-in-human trial of an experimental live, attenuated Zika virus vaccine developed by scientists at the National Institute of Allergy and Infectious Diseases (NAID), part of the National Institutes of Health. The trial will enroll a total of 28 healthy, non-pregnant adults ages 18 to 60 at the Johns Hopkins Bloomberg School of Public Health Center for Immunization Research in Baltimore, MD, and at the Vaccine Testing Center at the Larner College of Medicine. NAID is sponsoring the trial. UVM Associate Professor of Medicine Kristen Pierce, M.D., is a co-investigator for the Phase 1 clinical trial.

**PLANTE AND COLLEAGUES SAY HIGH RATINGS DON’T MEAN BLOOD PRESSURE APP WORKS**

UVM Assistant Professor of Medicine Timothy Plantz, M.D./’11, is the author of a report published in the Journal of the American Medical Informatics Association that argues that unregulated mobile health app use could give people a false sense of security, leading to dire health consequences. The researchers analyzed 261 user ratings and reviews for a mobile app claiming to change the iPhone into a blood pressure monitor. They found that the instant Blood Pressure app received an average of four out of five stars and positive reviews, despite a previous study by the research team published in JAMA Internal Medicine showed that four out of five times someone with high blood pressure used the app, they received falsely reassuring, non-realted results. The app was withdrawn from the market in July 2015. The report’s authors call for medical professionals to be more skeptical of apps that don’t have scientific studies backing them, and warn members of the public that just because on app has been endorsed by a health care professional doesn’t mean it works.

**JANSEN-HEININGER, ANATHY & TEAM’S STUDY DEMONSTRATES POTENTIAL LUNG FIBROSIS THERAPY**

UVM Professor of Pathology and Laboratory Medicine Yvonne Janssen-Heininger, Ph.D., is a senior study author and UVM Assistant Professor of Pathology and Laboratory Medicine Vikas Anathy, Ph.D., is first author for a publication in Nature Medicine that demonstrates a novel biological therapeutic candidate for regressing pulmonary fibrosis in a difficult-to-treat preclinical model of the disease. The research provides much-needed hope for the roughly 150,000 Americans suffering from this devastating condition. This study focused on an enzyme called glucosaminidase-1 — or GURX — which researchers believe has potential as a therapeutic agent for idiopathic pulmonary fibrosis. Janssen-Heininger, Anathy and colleagues are inventors on a patent for GURX, granted to the University of Vermont.

Welcome, Class of 2022

Whether it’s a passion, life experience, vocation or fate that brought them here, the first day of medical school is a major milestone for future doctors. The Class of 2022 arrived on campus August 13 to participate in their first course — Orientation — and begin the process of filling their brains with the people, places and information that will support their journey to earning an M.D. over the next four years.

‘THE RED WHEELBARROW’ CELEBRATES LITERARY AND VISUAL ARTS

Named after physician William Carlos Williams’ famous poem, The Red Wheelbarrow is an annual publication featuring visual and literary art from Larner College of Medicine students, alumni, faculty and staff. Lead editor Collin York ’20 compiled essays, poetry, photographs, and paintings — even images of string art and cross-stitch — for a 2018 journal that showcases the breadth of talent in the College community.

Find a link to the online version of The Red Wheelbarrow. Go to www.med.uvm.edu/vtmedicine
Empowering Residents to Improve Health Equity

In the 19th century, there may have been no more consequential biomedical scientist than Rudolph Virchow. His scientific research at a molecular level has had a profound impact on modern medicine even today, more than 150 years later.

For me, however, it is his work in social medicine that has made a lasting impression on my understanding of the responsibilities clinicians have to the health of their society. Virchow could have been content with his contributions to pathology and molecular biology, but he had the wisdom to recognize the powerful social, economic and political factors that influence the manifestation of disease. He started a weekly newspaper called Medical Reform to highlight how socioeconomics affect health disparities. The newspaper’s banner famously declared “physicians are the natural attorneys of the poor.” His 1848 report on a typhus outbreak in Upper Silisia remains a landmark public health investigation that highlighted the role of poverty, famine, and political corruption as root causes of the outbreak.

A deep body of literature has shown that race, gender, income level, sexual orientation, disability status, and insurance status have a profound impact on one’s experience of health and healthcare in the United States. Recent outbreaks such as Ebola and Zika reflect the extent to which health systems in the developing world lack the capacity to not only respond to health crises, but to provide basic medical care worthy of people’s inherent dignity.

As clinicians, we have a unique vantage point from which we can understand how these social and systemic factors impact our patients. We hear their stories and experience their tragedies. And yet, most often, we have not been trained to understand what we can do about it.

Medical education can empower future health professionals to meaningfully improve health equity. We can teach students and residents about topics in social medicine, and help them develop advocacy skills to work at a social and systemic level to improve health outcomes. Perhaps even more importantly, it can give trainees the opportunity to reflect on their values and their professional identity and ask them what role they would like to play in fixing the system.

For me, however, it is his work in social medicine that has made a profound impact on modern medicine even today, more than 150 years later, as Rudolph Virchow provides us with a remarkable example of a consequential biomedical scientist than Rudolph Virchow.

A DEEP BODY OF LITERATURE HAS SHOWN THAT RACE, GENDER, INCOME LEVEL, SEXUAL ORIENTATION, DISABILITY STATUS, AND INSURANCE STATUS HAVE A PROFOUND IMPACT ON ONE’S EXPERIENCE OF HEALTH AND HEALTHCARE IN THE UNITED STATES.

Course evaluations suggest that our course helps residents recontextualize with the idealism that made them want to pursue a calling in medicine. We hope that the course can help heighten their sense of self-efficacy, supporting them as they realize the power they have to make change in what often feels like a dysfunctional and unfair healthcare system.

LaMantia Invited as Inaugural Holly and Bob Miller Chair in Memory and Aging

Vermont philanthropists Holly and Bob Miller have made a $6 million gift to UVM to permanently endow three faculty positions. On August 21, 2018, Michael LaMantia, M.D., M.P.H., was invested as the inaugural Holly and Bob Miller Chair in Memory and Aging, and Rosemary Dale, Ed.D., A.P.R.N., was invested as the first Holly and Bob Miller Professor in Nursing Leadership. LaMantia is a nationally-recognized expert in the care of older adults, particularly those with cognitive impairments such as Alzheimer’s Disease and other dementias. Dale is chair of the Department of Nursing in the UVM College of Nursing and Health Sciences. A third faculty position will address clinical practice in nursing.

New Endowed Scholarship Supports Future Pediatricians

In honor of his 50th reunion, pediatrician and Burlington, VT native Todd Gladstone ’65, M.D. ’68, has established a $50,000 endowed scholarship through his estate plan to benefit Larner College of Medicine students with an interest in pediatrics. The Gladstone Family Endowment builds on a long history of support: the Connecticut-based pediatrician serves as Class Agent, and has been a faithful donor to the College for over four decades.

Recent Estate Gifts Benefit Students with Financial Need

• A gift from Eunice Marie Simmons ’45, M.D. ’49, established an endowed $600,000 scholarship fund to benefit Vermonters with financial need. A native of Montpelier, VT, Dr. Simmons graduated as valedictorian of her medical school class in 1949. She opened a solo practice in San Diego, Calif., and was the first female doctor affiliated with Mercy Hospital. She died May 4, 2017, at the age of 93.

• John Curran, M.D. ’71 and his wife, Margaret Curran, created the College of Medicine Class of 1971 Scholarship Fund with a $650,000 gift through a trust. The endowed fund will benefit medical students with financial need in perpetuity. Dr. Curran practiced family medicine in Northampton, Mass., from 1971 until his retirement in 1989. He was a member of The Cooley Dickinson Hospital staff for 39 years and a past president of the hospital.

Fund in Honor of Mark H. Beers, M.D.’82 Brings International Experts to Campus

The UVM Center on Aging and the Larner College of Medicine’s Geriatric Medicine program recently hosted two international experts in geriatrics with support from a fund established in memory of Mark H. Beers, M.D. ’82. Nestor Vollmar, M.D., M.P.H., professor of medicine and chief of the Department of General Medicine at Roehn University Bochum, and Mary Austrum, Ph.D., the Wesley F. Martin Professor of Alzheimer’s Education and Associate Dean for Diversity Affairs at the Indiana University School of Medicine, delivered a presentation titled “Caring for Caregivers and Transitions from Hospital to Home.” Dr. Beers, who passed away from diabetes-related complications in 2009, had an impressive career in geriatrics. He is best known for establishing the definitive list of medications that elderly patients should avoid, and for his role as editor-in-chief of the Merck Manuals. The Mark H. Beers, M.D. ’82 Fund in Geriatrics was established by his husband, Stephen Utice, with additional support from his sister, Jacqueline Beers Hertmans.

Wong Named First Bert P. Sunyer Williams ’58 Professor

Chueung Wong, M.D., was invested as the inaugural Bert P. Sunyer Williams ’58 Endowed Professor on June 8, 2018. Bert P. Sunyer Williams graduated from UVM in 1958 with a degree in nursing and was a long-time employee of the Medical Center Hospital of Vermont (now UVM Medical Center). Following her passing in 1992, her family was inspired by her courage in facing her own illness to establish an endowed fund in her memory to support education, research, and patient services related to women’s health care. This past year, Larry Williams Jr. (UVM ’82) and his family and friends raised additional funds to bring the endowed to the $1 million professorship level. A dedicated educator, Dr. Wong holds leadership positions in Gynecology and Gynecologic Oncology, and is associate dean of Community, Interprofessional, and Interprofessional Education.
