Subject: Research involvement

Hello,

I am a second year medicine resident looking for medical students to be involved in a large research project.

Briefly, we are collecting retrospective and prospective EMR data after a new supportive care checklist has been incorporated into care of hospitalized hematology patients. The EMR will be queried for appropriate use of supportive care measures, including antimicrobials, anticoagulants, catheters, skin break down, peri-rectal checks, and complications of inappropriate use. We are looking for 1-2 Medical Students, preferably 3rd year students, to be involved in the project for support in data evaluation and manuscript writing.

Could you please pass this along in the next email to students?

I am happy to provide more information on the project as needed.
